The present sequence represents an autityeant preparate the invention. The telomerase reverse transcriptase (hTRT), from the present invention. The present invention also describes the following methods: (A) determining the change whether a test compound is a modulator of hTRT, by detecting the change compound; (B) preparation of recombinant telomerase by contacting a compound; (B) preparation of recombinant telomerase by contacting a compound; (B) preparation of probe to the sample and detecting the complex formed or in the case of probe to the sample and detecting the complex formed or in the sample; (C) probe to the sample and detecting the complex formed or in the sample; (C) may detection, amplifying the product and correlating the presence of probe to the sample and detecting the complex formed or in the sample; (C) and (D) increasing the product with presence of hTRT in the sample; (C) and (D) increasing the proliferation of a vertebrate cell by increasing the proliferation of cancer a medicament that inhibits collipse ageing. A protein preparation of hTRT and that inhibiting the hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be effect of ageing or cancer. Inhibitors of telomerase activity, a protein preparation of hTRT can also be used in the new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Splice variant of a human telomerase reverse transcriptase fragment.
                                                                                                                                                                                              Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; telomerase reverse transcriptase; hTERT; T cell response;

                                                                                                                                               The present sequence represents a splice variant of a fragment of human telomerase reverse transcriptase (hTERT). The specification describes peptides derived from hTERT, which are capable of inducting a T cell response and are used in medicine. The hTERT peptides and nucleic acids encoding them are useful in preparing a medicament, which is a vaccine, an antisense molecule, or is capable of generating an antisense molecule in vivo, for treating cancer, or in preparing a diagnostic for diagnosing pancer. The cancer is, for example, breast cancer, prostate cancer, pancreatic cancer, colo-rectal cancer, lung cancer, malignant melanoma, leukemia, lymphoma, ovarian cancer, cervical cancer, or a biliary tract
                                                                   New polypeptides derived from human telomerase reverse transcriptase, useful in preparing a medicament for treating or preventing cancer, or in preparing a diagnostic for diagnosing cancer, e.g. breast cancer or prostate cancer
                                                                                                                                                                                                                                                                                                                                              Gaps

telomerase reverse transcriptase; hTERT; T cell response;

Gaudernack G, Moller M, Saeboe-Larssen S;

```
ö
The present sequence represents a splice variant of a fragment of human telomerase reverse transcriptase (hTERT). The specification describes peptides derived from hTERT, which are capable of inducing a T cell response and are used in medicine. The hTERT peptides and nucleic acids encoding them are used in medicine. The hTERT peptides and nucleic acids an antisense molecule, or is capable of generating an antisense molecule in vivo, for treating cancer, or in preparing a diagnostic for diagnosing cancer. The cancer is, for example, breast cancer, prostate cancer, pancreatic cancer, colo-rectal cancer, lung cancer, malignant melanoma, leukemia, lymphoma, ovarian cancer, cervical cancer, or a biliary tract

New catalytic protein of telomerase of a higher animal and a gene coding it - useful for diagnosis of diseases caused by the change activity of a telomerase

coding

Example 1; Page 14; 18pp; Japanese.

The specification describes a human catalytic telomerase protein. The products are useful in drug compositions for the diagnosis of diseases caused by the change in activity of telomerase. The present sequence appears in the specification.

AAY43128 standard; Protein; 283 AA.

                                                           The present sequence represents a human telomerase reverse transcriptase (ThTR) protein from a cDNA clone from the present invention. The present invention also describes the following methods: (A) determining whether invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (C) detecting of recombinant telomerase NAA component; (C) detection of preparation of hTRT with a telomerase RNA component; (C) detection of preparation of hTRT with a telomerase RNA component; (C) detection of cample and detecting the complex formed or in the case of RNA detection, camplifying the product and correlating the presence of fTRT in the sample; and (D) amplification product with presence of hTRT in the sample; and (D) amplification product with presence of hTRT in the sample; and (D) complification product with presence of hTRT in the sample; and (D) amplification product with presence of hTRT and that causes in cell correspond; and (B) the use of an agent that causes an increase in cell corresponding of hTRT and the polynucleotide encoding ageing. A protein preparation of hTRT and the polynucleotide encoding contract of ageing or cancer. Inhibitors of telomerase activity can be effect of ageing or cancer. Inhibitors of telomerase activity can be activity. A protein preparation of hTRT can also be used in the new
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                         Human telomerase reverse transcriptase protein from cDNA clone 712562.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

This sequence represents the human telomerase reverse transcriptase (hTERT). The invention relates to a monoclonal antibody recognising the hTERT. The antibody can be used for the investigation, diagnosis and treatment of telomerase-related diseases, especially diseases in which telomerase expression is up-regulated e.g. cancers.
                                                                                                                                                                                                                                                                                                                     telomerase catalytic subunit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

This invention describes novel human CRT-1 genes and their encoded proteins containing a reverse transcriptase motif, which act as telomerase inhibitors. The gene, its encoded protein and derived antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                 Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes novel human CRT-1 genes and their encode proteins containing a reverse transcriptase motif, which act as telomerase inhibitors.                                                                                                                                                                                                                                                                         The present sequence represents a splice variant of a fragment of human telomerase reverse transcriptase (hTERT). The specification describes peptides derived from hTERT, which are capable of inducing a T cell response and are used in medicine. The hTERT peptides and nucleic acids encoding them are used in medicine. The present, which is a vaccine, an antisense molecule, or is capable of generating an antisense molecule in vivo, for treating cancer, or in preparing a diagnostic for diagnosing cancer. The cancer is, for example, breast cancer, prostate cancer, pancreatic cancer, colo-rectal cancer, lung cancer, malignant melanoma, leukenia, lymphoma, ovarian cancer, cervical cancer, or a biliary tract
                                                                                                                                          New polypeptides derived from human telomerase reverse transcriptase, useful in preparing a medicament for treating or preventing cancer, or in preparing a diagnostic for diagnosing cancer, e.g. breast cancer or prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

```
The present sequence represents a fragment of human telomerase reverse transcriptase (hTERT). The specification describes peptides derived from hTERT, which are capable of inducing a T cell response and are used in medicine. The hTERT peptides and nucleic acids encoding them are useful in preparing a medicament, which is a vaccine, an antisense molecule, or is capable of generating an antisense molecule in vivo, for treating cancer, or in preparing a diagnostic for diagnosing cancer. The cancer is, for example, breast cancer, prostate cancer, pancreatic cancer, colo-rectal cancer, unique cancer, malignant melanoma, leukemia, lymphoma, ovarian cancer, cervical cancer, or a biliary tract carcinoma.
                                                                                                                                                                                      Amino acid sequence of human telomerase reverse transcriptase fragment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polypeptides derived from human telomerase reverse transcriptase, useful in preparing a medicament for treating or preventing cancer, or in preparing a diagnostic for diagnosing cancer, e.g. breast cancer or prostate cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; telomerase reverse transcriptase; hTRT; TRT; diagnosis; prognosis; cell proliferation; cancer; ageing; ribonucleoprotein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a splice variant of a fragment of human telomerase reverse transcriptase (hTERT). The specification describes peptides derived from hTERT, which are capable of inducing a T cell response and are used in medicine. The hTERT peptides and nucleic acids encoding them are useful in preparing a medicament, which is a vaccine, an antisense molecule, or is capable of generating an antisense molecule in vivo, for treating cancer, or in preparing a diagnostic for diagnosing cancer. The cancer is, for example, breast cancer, malignant melanoma, pancreatic cancer, colo-rectal cancer, lung cancer, malignant melanoma, leukemia, lymphoma, ovarian cancer, cervical cancer, or a bilhary tract

antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; telomerase reverse transcriptase; hTERT; T cell response;

New catalytic protein of telomerase of a higher animal and a gene coding it - useful for diagnosis of diseases caused by the change in activity of a telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence represents a catalytic telomerase protein. The products are useful in drug compositions for the diagnosis of diseases caused by the change in activity of telomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CRT-1; reverse transcriptase; telomerase; inhibitor; detection; telomerase activity; cancer cell; screening; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence represents a fusion protein from an example of the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound;

(B) preparation of recombinant telomerase by contacting a protein preparation of hTRT with a telomerase by component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of HTRT in the sample; and (D) increasing the product with presence of HTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation of reate a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the used to treat conditions that are associated with high telomerase contactions that are associated with high telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      .

This invention describes novel human CRT-1 genes and their encoded proteins containing a reverse transcriptase motif, which act as telomerase inhibitors. The gene, its encoded protein and derived antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                                                                                                                   Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of
                                                                                                                                                                                                                      Example 1; Page 37-39; 44pp; Japanese.

"Telomerase reverse transcriptase genes identified in Tetrahymena thermophila and Oxytricha triffallax.";
-!- RUNCTION: TELOMERASE IS A RIBONUCLEOPROTEIN ENZYME ESSENTIAL FOR THE REPLICATION OF CHROMOSOME TERMINI IN MOST BUKARYOTES. IT ELONGATES TELOMERES. IT IS A REVENSE TRANSCRIPTASE THAT ADDS SIMPLE SEQUENCE REPEATS TO CHROMOSOME ENDS BY COPYING A TEMPLATE SUGCELLULAR LOCATION: Nuclear.
-!- SUBCELLULAR LOCATION: Nuclear.
-!- SIMILARITY: BELONGS TO THE REVERSE TRANSCRIPTASE FAMILY.
TELOMERASE SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SCIENCE 276:561-567(1997).

-!- FUNCTION: TELOMERASE IS A RIBONUCLEOPROTEIN ENZYME ESSENTIAL FOR THE REPLICATION OF CHROMOSOME TERMINI IN MOST EUGARYOTES. IT ELONGATES TELOMBRES. IT IS A REVERSE TRANSCRIPTASE THAT ADDS SIMPLE SEQUENCE REPEATS TO CHROMOSOME ENDS BY COPYING A TEMPLATE SEQUENCE MITHIN THE RNA COMPONENT OF THE ENZYME.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Transferase; RNA-directed DNA polymerase; Telomere; Nuclear protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-MAY-2000 (Rel. 39, Last sequence update)
30-MAY-2000 (Rel. 39, Last annotation update)
Telomerase reverse transcriptase (EC 2.7.7.-) (Telomerase catalytic subunit) (Telomerase subunit P123).
Eukaryota, Alveolata, Ciliophora, Spirotrichea, Stichotrichia,
Stichotrichida, Oxytrichidae, Oxytricha.

Proc. Natl. Acad. Sci. U.S.A. 95:8485-8490(1998).

-! FUNCTION: TELOMERASE IS A RIBONUCLEOPROTEIN ENZYME ESSENTIAL FOR FUNCTION: TELOMERASE IS A RIBONUCLEOPROTEIN ENZYME ESSENTIAL FOR ELOMERASE IT IS A REVERSE TRANSCRIPTASE THAT ADDS ELOMETES TELOMERES. IT IS A REVERSE TRANSCRIPTASE THAT ADDS SIMPLE SEQUENCE REPEATS TO CHROMOSOME ENDS BY COPYING A TEMPLATE SEQUENCE WITHIN THE RNA COMPONENT OF THE ENZYME.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Terrahymena thermophila.

Ubiquinol oxidase polypeptida 1 (EC 1.10.3.-) (Cytochrome O subunit 1)
(Oxidase BO(3) subunit 1) (Cytochrome O ubiquinol oxidase subunit 1).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (by Similarly).

-!- CATALYTIC ACTIVITY: Ubiquinol-8 + O(2) = Ubiquinone-8 + H(2)O.

-!- COFACTOR: Contains two protoheme IX (heme BS5 and BS62) and copper B (By similarity).

-!- PATHWAY: Ubiquinol oxidase catalyzes the terminal step in the electron transport chain.

-!- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).

-!- SIMILARITY: BELONGS TO THE HEME-COPPER RESPIRATORY OXIDASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SEQUENCE FROM N.A.

-! FUNCTION: Cytochrome O terminal oxidase complex is the component
of the aerobic respiratory chain that predominates when cells are
grown at high aeration. This ubiquinol oxidase shows proton pump
activity across the membrane in addition to the electron transfer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Buchnera aphidicola (subsp.
